Information for Authors

"HETEROCYCLES"—*An International Journal for Reviews and Communications in Heterocyclic Chemistry* publishes accounts of research on the organic and physical organic chemistry of heterocyclic compounds and natural products having the heterocyclic system. All manuscripts and correspondence should be addressed to The Editor:

Tetsuji Kametani
The Sendai Institute of Heterocyclic Chemistry
No. 53-32, Kawauchi-Sanjuninmachi, Sendai 980, Japan

Reviews—The Journal welcomes review-type manuscripts containing appropriate subject material. An acceptable review may embrace the results of various workers in a given area or may feature recent developments from the author's own laboratory. A review that is distinguished by a novel interpretation or presentation of earlier findings is especially suitable and will usually be restricted to fifty pages per article, including drawings and references.

Communications must feature novel, unpublished material in preliminary form; they may be either experimentally oriented or entirely theoretical. The editors will consider manuscripts which feature significant new results. Contributions that are sensibly speculative or constitute new interpretations of older findings are appropriate. Include summary at the beginning of the text.

Heterocyclic Reports should be concise accounts of studies of a limited scope. The standards of quality for Heterocyclic Reports are the same as those for Communications. Contributors who wish to have an experimental section included in their manuscripts should sudmit these manuscripts as Heterocyclic Reports.

Announcements—The Journal will print, upon request, announcements of meetings, new books, or other developments of interest to heterocyclic and natural product chemists.

Presentation of manuscripts—Manuscripts should be written in a clear and accurate fashion with careful attention to detail. Manuscripts are considered for publication on the proviso that they have not been, nor will be, published elsewhere. Ordinarily a manuscript will be sent to two competent referees for critical appraisal. An author is free to suggest the names of appropriate scientific experts who might be called upon for refereeing purposes. Comments of referees may be transmitted to the authors, but in no instance will the names of the referees be disclosed to the author without prior permission.

Form of manuscript—Submit manuscripts in triplicate (in English), including the original typewritten copy, with copies of graphs, drawings, etc. Manuscripts should be typed, double spaced, using a black ribbon (blue ink can not be reproduced) on good quality white bond paper. Special size paper, 25.6 cm wide by 36.4 cm deep with an exact typing area of 21 cm wide by 29.5 cm deep should be used from January issue in 1979, as "a typing format" which is inserted at the end of January issue of volume 12 or can be obtained on request from the Chief Editor. However, any good quality paper may be used, if the actual typing area is 21 cm wide by 29.5 cm deep. If the above typing format is not observed, the manuscripts will be returned to the Authors.

A. *General Instruction*

1. *Arrangement.* Typing, on one side of the paper, should occupy the space within the guide-lines on the laysheets.
2. *Spacing.* Text and references must be in *double spaced* typing.
3. *Typing.* Use a black typewriter ribbon, preferably on an electric machine. Pages must be kept clean; any smudges would be reproduced by the photo-offset process.
4. *Corrections.* To correct errors either:

(a) Retype several words on a spare laysheet, then paste the strip over the section to be corrected, using rubber cement; or (b) Delete the incorrect part with 'white correcting fluid' and retype (erasures by 'rubber' are not acceptable). The same typewriter should be used for corrections.

5. *Italics.* Words normally printed in italics should be in *Roman* type and *Underlined*.

B. *Layout of Manuscripts*

1. *General.*

(a) *Position on page.* The Title, Authors' names, Address, and Abstract must be inset 2.4 cm from the left-hand margin, following the dotted guide-line on the laysheet. The text and references must begin at the left-hand margin (guide-line).

(b) *Heading.* The heading to the paper must comprise:

TITLE (in ROMAN CAPITALS: not underlined)
Authors' name(s) (First letters only in capitals)
Authors' address for correspondence

[Authors' name should include the first name (without degrees) and the senior author should be indicated by an asterisk (*).]

(c) *Abstract.* Every manuscript must have an Abstract. This must be typed double spaced.

2. *Tables.* Tables must be inserted by the authors at the appropriate points in the text.
3. *Structural Formulae, Figures, Illustrations and Graphs.* These must be original line drawings or sharp glossy photographs (*not* Xerox or similar copies). They should be inserted by the authors at the appropriate points in the text. Captions and wording on the figures should as far as possible be typed.
4. *Mathematical Expressions and Chemical Equations.* Simple mathematical expressions should be typed on one line in the text, e.g. 1/5 or 0.2, not $\frac{1}{5}$. More complex expressions should be displayed, beginning at the blue dotted line 2.4 cm from the left-hand margin of the laysheet. In such cases expressions should be numbered in parentheses flush to the right, for reference in the text.
5. *Heading and Sub-headings.* Main headings, in capitals, should commence 2.4 cm from the left-hand margin, viz. at the dotted line in case of review.
6. *Abbreviations.* Abbreviations should be in accordance with the International System (SI) as adopted by the Chemical Society (London) on Weights and Measures. Common abbreviations are: meter, m; centimeter, cm; millimeter, mm; micrometer, μm; nanometer, nm; kilogram, kg; gram, g; milligram, mg; microgram, μg; nanogram,

ng; milliliter, ml; microliter, μl; molar, M; millimolar, mM; micromolar, μM; normal, N; disintegrations per minute or second, dpm or dps; centigrade, °C; second, sec; minutes, min; hours, h; standard deviations, SD; standard error, SE; percent, %; melting point, mp; boiling point, bp; calorie, cal; kilocalorie, kcal; nuclear magnetic resonance, nmr; infrared, ir; ultraviolet, uv; number, No; Angstrom units, A, frequency, Hz; parts per million, ppm; equation, Eq.

7. *Nomenclature.* All nomenclature should be simple, unambiguous, and in conformity with the conventions developed by the International Union of Pure and Applied Chemistry.

8. *Acknowledgements and References.* Acknowledgements may be included as a separate section. Authors are requested to submit their references according to the following format:

1. A. R. Battersby, 'Oxidative Coupling of Phenols', eds. by W. I. Tayor and A. R. Battersby, Marcel Dekker, Inc., New York, 1967, p. 117.

Reprints

Owing to the short production time in this Journal, it is essential to indicate the number of reprints when submitting the manuscript. Confirmation of such orders will accompany the notification of acceptance. No page charge is made for publication in case of reviews.

BUSINESS AND SUBSCRIPTION INFORMATION
